Projects

Restaurant Finder

· (ReactJS, HTML, CSS, NodeJS)

This project is aimed at finding restaurants near you. This is a web application built with ReactJs, HTML, CSS. It has features like

- Filtering based on ratings
- Search
- Client-side routing using react router Dom library.

E-commerce Application

· (Vanilla JavaScript, HTML, CSS)

This project is an E-commerce place where users can visit and buy items. It is a functional application built with Javascript, HTML and CSS. It has features like

- Client-side rendering
- Checkout page
- Add to cart

The project is live and you can view it here <https://shoppingcarttechm.netlify.app/>

Not_there_yet

· (ReactJS, Nodejs, PassportJS, Prisma Orm)

This project is code named not_there_yet. Through this project I aim at solving a modern day problem, where you can find and make an appointment with the barber of your choice at the saloon they're working at. I wrote the api for this in Express and nodejs. Implemented JWT authentication.

UPI Payments Categorizer

· (Python, ReactJs, FastAPI, Web Scraping, Beautiful Soup)

This project is aimed at solving the problem of 'Difficulty in segregating the payments' made through UPI using different apps like PhonePe and Paytm. The AI model employs supervised learning to identify the categories to which a payment belongs to. This project is currently under development.

Is the modern-day CRM proving to be counter-productive among consumers

Companies must maintain excellent relationships with their customers in a highly competitive market. The research study would investigate several approaches and procedures for building effective CRM to please customers. The study & goal was to see how efficient customer relationship management (CRM) is, at keeping and satisfying customers and also to find out if it is proving to be counter-productive.

Skills

Python, NodeJS, JavaScript, HTML, CSS, MYSQL, Pytorch, Java, User Acceptance Testing, Project Management, Business Analysis, Agile Methodology, GIT
